

Ezequiel Menor

Mobile and backend software developer

Gandía, Valencia · [ezequielmenor.es](#) · [LinkedIn](#) · [GitHub](#) · [InfoJobs](#)

Software developer specialized in mobile applications and backend.

Experience

Clínicas Dorsia

Mobile Application Developer — Internship · Mar 2026 - Jun 2026

Mobile development internship using Flutter for patient and clinic management.

Flutter · Mobile development · Clinical management flows

Clínicas Dorsia

Mobile Application Developer · Jun 2026 - Aug 2026

Continued professionally developing the Flutter mobile application for patient and clinic management.

Flutter · Mobile development · Clinical management flows

Featured Projects

CoreOS — Personal Operating System

A local-first personal operating system for capturing thoughts freely and organizing them later with AI, while keeping the original content safe on device.

- Built a local-first mobile app for capturing free-form text and automatically organizing it through AI classification.
- Designed the persistence flow so raw input is stored in SQLite before AI processing, preventing data loss on failure.

[Website](#) · [Source](#)

AIES

A harness to orchestrate AI agents: flow definition, tools and evaluation. Actively in development.

AI Agents · LLMs · Harness

[Website](#) · [Source](#)

Stackd

Software agency built by three cousins. Websites, apps, SaaS, AI automation and maintenance — with the same team from start to finish.

Co-founders: Arnau, Ezequiel and Mateo · Projects: SMASH, NOOK, Volea.io, Getflow · [stackd.codes](#)

Education

DAM (Multiplatform Application Development)

Higher Vocational Training · María Enriquez · Sep 2024 - Jun 2026

SMR (Microcomputer Systems and Networks)

Vocational Training · María Enriquez · Sep 2022 - Jun 2024

Skills

TypeScript & JavaScript Intermediate	Frontend · Backend · Web development
React & React Native Intermediate	Frontend · Mobile applications · TypeScript
Java & Spring Boot Intermediate	Backend · REST API · Architecture
Flutter & Dart Intermediate	Mobile development · Cross-platform · Frontend
PostgreSQL & SQL Intermediate	Databases · Data modeling · SQL queries
Applied AI for development Intermediate	LLMs · AI Agents · Prompting

Engineering Workflow

- Ticket-driven: every change starts from a ticket with scope and acceptance criteria, and closes with evidence.
- One branch per ticket and a PR before integrating: no relevant change lands directly on main.
- Verification is mandatory before “done”: tests, typecheck/build and lint in green.
- AI-assisted review as an extra quality layer; the merge decision is mine.
- Small, traceable changes: semantic commits, documentation and ADRs whenever an architecture decision is made.
